Masterarbeit

Thema: *Solving social dilemma using concepts of game theory and philosophy of joint action*, Note: 1,1

Betreuer: Prof. Dr. Thomas Bartelborth, Prof. Dr. Hans-Bernhard Schmid

Abstrakt: Social dilemma have been studied extensively by orthodox game theory, recommending non-cooperation as the only rational solution. The philosophy of joint intentionality on the other hand has neglected the effect that social dilemmas have on the formation and persistence of joint intentions. This paper discusses if and how concepts, developed in game theory, such as empathy, team reasoning and commitment, might be incorporated into the major accounts of joint intentionality.

Bachelorarbeit

Thema: *Logic of requirements*, Note: 2,3

Betreuer: Prof. Olivier Roy

Abstrakt: It has been argued that the concept of rational requirements

developed in Broome's work 'Rationality through Reasoning' can be modelled using a minimal modal logic. The thesis provides an account of such a logic and combines it with a temporal logic in order to explore unwanted consequences of the rational requirement of 'Persistence of Intention' proposed by Broome.
